GARDEN-STONE- REECORD

PROJECT DISCRIPTION

This project will be carried out around the classical garden of Suzhou, China, and focus on the core Taihu stone of the garden for research and development. By combining the appreciation of the four characteristics of "transparent, leaky, thin and wrinkled" of Taihu stone, we can promote the development of the whole project, so as to have a deeper understanding of the beauty of Taihu stone, so as to complete the implementation of the final project. Combined with the study of today's clothing market and ancient Chinese clothing, while thinking about the combination of Taihu stone and clothing, understand modern clothing skills and combine them with ancient Chinese clothing, and finally form a design and concept in line with the current market. In terms of fabric, it is combined with Chinese non-heritage fabric "xiangyun yarn" and wool, copper ammonia silk, etc. commonly used in modern clothing. Through the collision of modern skills and ancient skills, the final performance of ready-made clothes is more vital.

FINAL DESIGN
